Recommendation - Gustav Krowicki

Gustav has worked as an UX Intern in our design team at Valtech for a period of 20 weeks. During this time, Gustav consistently demonstrated his knowledge and skill within UX and product design, while being able to actively challenge and provide input on business and design processes.

From day one, Gustav have brought an infectious enthusiasm and positive attitude towards the projects he has been involved in. He has collaborated with various disciplines in the projects including Product Managers, IT Architects, Front and backend developers, business analysts, and UI designers.

At Valtech Gustav has gained experience in the Agile and Product-led methodology from two major projects with Vestas as a client.

In the first project Gustav analyzed multiple customer interviews, wireframed concepts, created high fidelity designs and actively participated in co-designing sessions with stakeholders to ensure a design with high business and usability value.

In the second project Gustav had a diverse role of being part of a continuous discovery process. This included design sprints, analyzing interviews and analytics data, creating wireframes, identifying, and challenging business rules. At this project Gustav also worked on user stories and created designs based on business requirements, aligned with stakeholders, and refined it with developers. The client gave very positive feedback on Gustavs work and involvement in the process.

Additionally, Gustav has also been a pivotal part of a design system project with the same client.

Gustav's time at Valtech has been a huge pleasure. A great colleague to have around the office, and an ambitious and curios UX designer with great attitude towards his work.
